

ABSTRACT OF THE DISCLOSURE

A reconfigurable processor module comprising hybrid stacked integrated circuit ("IC") die elements. In a particular embodiment disclosed herein, a processor module with reconfigurable capability may be constructed by stacking one or more thinned microprocessor, memory and/or field programmable gate array ("FPGA") die elements and interconnecting the same utilizing contacts that traverse the thickness of the die. The processor module disclosed allows for a significant acceleration in the sharing of data between the microprocessor and the FPGA element while advantageously increasing final assembly yield and concomitantly reducing final assembly cost.
